

Code Review

“Fear of manufacturing process and chemical issues should not stop your construction project. In too many cases, city building officials, fire inspectors, contractors, and Architects do not work enough with manufacturing processes to be comfortable. As a result, they tend to react over conservatively costing your project time and money .”

SERVICES:

- Building Code Review
- Fire Code Review
- Mechanical Code Review
- Environmental Permitting Requirements
- Health and Safety Design Requirements
- HVAC Design
- Chemical Control and Containment

OUR APPROACH:

Pinnacle’s familiarity with a variety of chemical processes and the applicable code requirements allows us to more accurately define the necessary procedures, design the proper facilities and controls, and where necessary, train the inspectors.

BENEFITS TO YOU:

- At Pinnacle, project costs are defined up front, providing the owner with a clear picture of the required investment. Upfront project definition and management helps reduce unexpected surprises and project downtime.
- With Pinnacle’s process and facility engineering experience, we can also provide design and engineering services, when changes or adjustments in manufacturing methods are necessary.

PINNACLE SOLUTIONS:

A plating shop hit several road blocks from the Fire and Building Inspection Services in their initial planning stages to relocate. Pinnacle worked with the client and the City to define the code requirements, request variances and alternative control methods where appropriate, and helped educate the inspectors on specifics of the plating process, making for a much smoother transition.
