

Environmental Management Systems

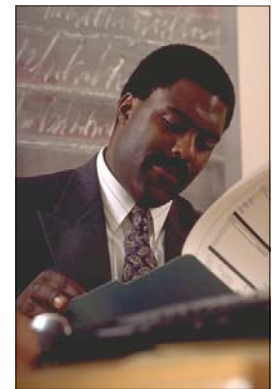

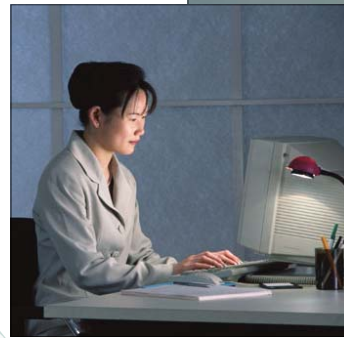

“Environmental laws have accomplished much but not because they are efficient. Through planning, consolidating redundant programs, and providing environmental management tools, operational employees can add EFFICIENT to their list of environmental accomplishments.”

SERVICES:

- ISO 14000
- Management Commitment
- Environmental Aspects
- Legal Requirements
- Short Term Objectives
- Long Term Objectives

 - Internal
 - External
- Documentation
- Documentation Control
- Operations
- Emergency Response Plan
- Sampling
- Testing
- Corrective Action
- Preventative Action
- Record keeping
- System Audit
- Management Review

OUR APPROACH:

Pinnacle's staff of trained ISO 14000 auditors take great pride in partnering with our clients to help them develop systematic Environmental Management Systems that are customized to fit their needs.

BENEFITS TO YOU:

- A solid EMS not only incorporates the regulations and requirements of a client's facility, but also offers clients a competitive advantage through *improved environmental performance* and *reduced overall environmental management costs*.
- EMS planning and development *improves company procedures* and documentation, provides your employees with *increased environmental awareness*, and creates a *tool to track and update compliance regulations*.

PREPARING FOR THE FUTURE:

While the rigorous nature of ISO certification may not fit a client's current needs, Pinnacle can help provide the EMS framework now. Thus as a situation or need changes, the existing Environmental Management Systems can be used to pursue ISO certification without investing a significant amount of time or expense.
