

Waste Management

“Wastes represent a liability, a liability represents a cost—eliminate the waste, eliminate the cost.”

SERVICES:

- **Hazardous Waste Management**
 - Management Planning
 - Reporting
 - Training
 - Contingency Planning
- **Standard Operating Procedures**
 - Labeling
 - Storage and Accumulation
 - Transportation
 - Manifesting/Record Keeping
- **Environmental Audits**
 - ISO 14001
 - General Compliance
 - Transportation
 - Disposal Facilities
- **Pollution Prevention Planning**
 - Opportunity Assessment
 - Engineering
 - Implementation
- **Regulatory Negotiations and Community Relations**
- **Waste Disposal**
 - Sampling and Characterization
 - Lab Packing
 - Best Management Practices

OUR APPROACH:

Beyond the more conventional waste management services, our staff is able to work with clients to reduce waste generation at the source.

Our experience has shown that waste reduction just doesn't happen by chance. It is a long term liability that needs a well-planned long term solution.

BENEFITS TO YOU:

- With a diverse staff, having expertise in the environmental, regulatory, and engineering arenas, Pinnacle provides integrated solutions for the management of your waste, incorporating cost effective, innovative methods.
- We consult with a facility's entire staff, providing recommendations that are workable for your specific operation.

PINNACLE SOLUTIONS:

- A client's on-site cyanide destruction and treatment system was not able to meet higher production levels. Pinnacle was brought in to help design the new system. By working with the operators to determine optimal chemical addition rates, the need for a new destruction and treatment system was eliminated (est. capital cost \$800,000). The facility also reduced chemical costs by \$150,000 per year and eliminated process fluctuations that were causing quality issues.
